

RECLAIM CONTROL OF YOUR CRAFT!

A X I O M

AXIOM Beta is the very first crowdfunded open source 4K Super 35 digital cinema experimentation/development platform. Its modular design is small and lightweight but offers different lens mounts and even sensor options - perfect for customizing and adapting to your project's needs.

AXIOM Gamma is to become the very first entirely open and modular 4K Super 35 (sensor upgradeable) digital cinema production camera where every component can be replaced on demand to create a sustainable production camera platform and accompanying ecosystem (anyone can develop/sell new modules/accessories/services without any license/royalty restrictions). *Development until Q3 2016*
